

CHAT BOX for 1 to 4 persons

Flexibility and modularity of the system as well as clear forms are our guiding principles.

- **CHAT BOX – mobile silence room**

In modern office life, teams are created project- based, thus the room structure needs to adapt smoothly to the quick change in requirements.

The CHAT BOX is the answer to these demands: it is an autonomous, mobile room-in-room module, which is changeable at any time without affecting the existing architectural structure. It is internally and externally flexible and fulfils the requirements of modern office life.

- **Individual solutions** for lighting, air conditioning and acoustics can easily be incorporated within the system.
- **Thoughts need space.** Constructive chat box creates building independent room-in-room modules – oases of quiet within hectic office landscapes or public spaces. Strictly integrated, on the one hand, into the corporate image using graphic, typographical and coloured design elements, while remaining spatially autonomous, thanks to independent lighting, ventilation and acoustic solutions on the other.

Mountings for projection TV screens, beamers or speakers facilitate multimedia presentations. After all, thoughts beg to be shared.

CHAT BOX – mobile silence room.

Different sizes to meet different needs.

Easy to plug in to building services.

- Painted or anodized aluminium frames
- Laminated safety glass - 37 or 40dB
- Ceiling module A – acoustic
- Ceiling module B – readiness for ventilation, lighting and fire alarm
- Easy to install – installation instructions included
